

YEAR ROUND REMOTE SENSING IN MINNESOTA'S SENTINEL LAKES 10 YEARS OF LESSONS LEARNED

Lee Engel

Minnesota Pollution Control Agency

Casey Schoenebeck, Tim Martin

Sentinel Lakes Long Term Monitoring Program

Minnesota Department of Natural Resources

MINNESOTA'S SENTINEL LAKES

SENTINEL LAKES MONITORING

- ▶ Water chemistry
- ▶ Remote sensing
 - ▶ Cont. water temp., D.O. and lake level
 - ▶ Nested wells (ground/surface water)
- ▶ Primary Producers
 - ▶ Phytoplankton
 - ▶ Macrophytes
- ▶ Zooplankton
- ▶ Fisheries
 - ▶ Littoral fish (Fish IBI)
 - ▶ Juvenile fish (spring and fall EF)
 - ▶ Pelagic Fish (vertical gillnets and hydroacoustic)
- ▶ Collaborative Program
 - ▶ MDNR, MPCA, and external cooperators

SENTINEL LAKES SENSOR ARRAYS

- ▶ Temperature Monitoring
 - ▶ 25 Lakes
 - ▶ Over 180 loggers deployed
- ▶ Dissolved Oxygen
 - ▶ 8 Lakes
 - ▶ In total, > 100 cont. DO sensors
- ▶ Water Level Monitoring
 - ▶ 9 lakes
 - ▶ Other lakes use staff gauges
 - ▶ 4 lakes nested GW wells

SENSOR ARRAYS START UP COST

- ▶ Temperature Monitoring
 - ▶ \$100 per sensor
- ▶ Dissolved Oxygen
 - ▶ \$1000 per sensor
- ▶ Funding provided by grants, gifts, state monitoring budgets
 - ▶ MDNR long term monitoring budget
 - ▶ Glacial Lakes Fish Habitat Partnership Grant
 - ▶ USFWS gifted loggers

TEMPERATURE CHAIN EXAMPLE

Carlos Temperature Sensor Chain					
0		Epilimnion	22		Hypolimnion (loggers placed at geometrically increasing intervals down to the bottom)
1	Logger	Metalimnion (loggers placed at 1 meter intervals)	23	Logger	
2			24		
3	Logger		25		
4			26	Logger	
5	Logger		27		
6			28		
7	Logger		29		
8			30	Logger	
9	Logger		31		
10			32		
11	Logger		33		
12			34		
13	Logger		35	Logger	
14			36		
15	Logger		37		
16			38		
17	Logger		39		
18			40		
19	Logger		41	Logger	
20			42		
21	Logger		43		
			44		
			45		
			46		
			47		
			48	Logger	

DISSOLVED OXYGEN CHAIN EXAMPLE

[illegible]

LESSONS LEARNED CHAIN SETUP

- ▶ Rope - polyester such as Dacron wears better than nylon and polypropylene and is strong with little stretch (recommended)
- ▶ Floats – closed cell foam, label with sticker, paint top black, submerge underwater, back up float, big loop
- ▶ Retrieval during winter has worked well, use side scan sonar and under water camera
- ▶ Key data points – distance last sensor is from bottom and depth during sampling visits - sounding chain
- ▶ Take profiles during sampling visits

DATA ANALYSIS - TEMPERATURE

DATA ANALYSIS – # OF DAYS STRATIFIED

DATA ANALYSIS – DISSOLVED OXYGEN
